HPLC, UV-VIS SPEC AND FTIR TRAINING PROGRAMME 26TH – 28TH MARCH 2024

C CFRD is conducting a three days hands-on training programme on HPLC, UV-Vis Spectrophotometry and FTIR techniques. HPLC is a commonly used and extremely powerful chromatographic technique, with applications in areas such as pharmaceutical, bio-analytical, food and beverage, clinical, forensic, environmental and drug development laboratories. Fourier-transform Infrared Spectroscopy is utilized for the observation and identification of various organic and inorganic materials in solid and liquid forms. FTIR analysis can reveal the composition of solids and liquids in minute detail very quickly, making it one of the most commonly applied testing procedures for a wide variety of applications. UV-Vis Spectrophotometry is a quantitative technique used to measure absorbance of light by chemical substances.
